Overview

- L-Edit: An Integrated Circuit Layout Tool
- Documentation Conventions

Getting Started

- Launching L-Edit
- The Application Interface
- Application Parameters
- Drawing Parameters
- Selection Parameters
- Technology and Grid Parameters
- Color Parameters
- Replacing the Setup
- Exporting the Setup in Text Format
- Getting Help

Exiting L-Edit

Working with Files and Cells

Files
Cells
Instances
Grouping and Ungrouping
Layers
Layer Setup
Special Layers Setup
Wire Styles
Printing

Creating and Viewing Layout

Drawing Layout
Selecting and Deselecting Layout
Moving Layout
Viewing Layout

Showing and Hiding Layout

Finding and Editing Objects

Finding Objects
Editing Objects
Copying and Duplicating Objects
Pasting Objects
Deleting Objects
Undoing Operations

Generating Layers

Introduction
Operations
Defining Generated Layers
Creating Generated Layers
Working with Generated Layers
Working with 45° Objects

Cross-Section Viewer

- Introduction
- Implementation
- Operation

Checking Design Rules

- Introduction
- Design Rule Sets
- Design Rule Types
- Checking the Layout
- Correcting Errors
- Optimizing Performance

Extracting Layout

- Introduction
- Configuring the Extractor
- Running the Extractor
- Subcircuit Recognition

Data Formats
